Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                      USA
                                                                                                                                                                                                                                                    USA
  St. Louis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, B. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51-18. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

                            NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Center Clone name: 296_C_23

Baylor Plaza, Houston, TX 77030, USA.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the serimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (05-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is
contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LeuAsnGlnLysLysArgLeuGlnGlnLeuLeuGlnArgAlaLeuIleAsnSerGlnGlu 95

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 225634: contig of 225634 bp in length 225635 225734: gap of unknown length 225735 231311: contig of 5577 bp in length. On Nov 15, 2002 this sequence version replaced gi:23265010.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contigs-scaffold, and there may be sequence contigs within a contigs-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Worley, K.C.

                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  80
                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the human tumour suppressor gene INGIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MetLeuGlyGlnGlnGlnGlnGlnLeuTyrSerSerAlaAlaLeuLeuThrGlyGluArg

The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular aging, anchorage dependence and apoptosis. The tumour suppressor protein, p47ING3, nucleic acids encoding it and antibodies against it are useful for diagnosis, prevention and treatment of tumours and cancers. The p47ING3 DNA is also used in gene therapy.
                                                                                                                                                                                                                                                                                                                     Tumour suppressor; p471NG3; cell proliferation; cellular aging; p331NG2;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80
                             The present sequence represents the human tumour suppressor gene INGIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such

This sequence encodes the human tumour suppressor (TUSUP) protein. The TUSUP sequence was identified from a human lung cDNA library. The protein is 240 amino acids in length and has one potential cAMP and cGMP dependent protein kinase phosphorylation site, nine potential protein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation site. TUSUP has structural and chemical similarity to p33. TUSUP can be used to tracts or of the immune system. Agonists of the TUSUP protein can be used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human tumour suppressor protein for treating cancer, particularly of reproductive and gastrointestinal tracts or immune system -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           69 AC-CGGCTGCTCACCTACGTGCAGGACTACCTTGAGTGCGTGGAGTCGCTGCCCCAC

                                                          The invention relates to a combination comprising a number of substantially purified and isolated polynucleotides which are co-expressed with genes known to be involved in bone remodelling and osteoporosis. The invention is used to diagnose disorders associated with bone remodelling or osteoporosis. ABS70344-ABS70512 represent human bone remodelling genes of the invention.

In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with C ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the C p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 mor significant variations in its expression suggesting that ING1 was not a useful gene to study in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting nucleic acid encoding exon 1b of ingl, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          207
                   Gene, each having their own promoter have been discovered.

Expression of one promoter (la) produces a protein identical to indentical to midentical to one promoter (la) produces a protein identical to indentical c-terminal fragment to ING1 but an additional 104

On identical C-terminal fragment to ING1 but an additional 104

Consider the constant of the newly discovered protein has been designated p371NG1 (Wild type ip33)NG31. p371NG1 has the characteristics of an oncogene. When overexpressed in cells (even proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an or isolated nucleic acid having the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the concogenic form of ing1. Novel peptide sequences taken from the 104 concogenic form of ing1. Novel peptide sequences taken from the 104 concogenic form of ing1. Novel peptide sequences taken from the 104 concogenic form of ing1. Novel peptide sequences taken from the 104 concogenic form of indetection methods for treatment of cell the prolypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1102 GATGAGAAGATCCCAGATCGTGAGTCAGATGGTGGAGCTGGAGGAGAACCGCAGCAGCAGAAGA

In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functionad within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its expression suggesting that ING1 was not a useful gene to study in cancer eticlogy. However, alternative initiation exons of the ing1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnosing

Expression of one promoter (la) produces a protein identical to ING1. Expression of a second promoter (lb) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 h.terminal amino acids. The newly discovered protein has been designated p371NG1 (Wild type: p331NG1). p371NG1 has the characteristics of an oncogene. When overexpressed in cells (even

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       those expressing wild type p53) p371NG1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the oncogenic form of ing1. Novel peptide sequences taken from the 104 N-terminal peptide of p371NG1 can also be used to raise antibodies that can also be used in detection methods for the p371NG1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and

The sequence is a variant of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cancer associated antigen; ING1; tumour suppressor; cancer; vaccine; ss

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discloses monoclonal antibodies which can be used, in combination, to specifically recognise epitopes of ING1 (inhibitor of growth 1) protein isoforms. ING1 is a tumour suppressor gene and its expression is regulated through the cell cycle, peaking in the S phase. Expression of ING1 is down regulated in breast tumours and lymphoid malignancies. Overexpression of a construct containing the ING1 gene is able to inhibit cell growth by reducing the fraction of cells which enter into the S phase. The monoclonal antibodies are useful for detecting an ING1 protein in a cell, which involves selecting a cell that ectopically or endogenously expresses ING1 protein. The anti-ING1 monoclonal antibody combination consists of two or more antibodies of CAbl-CAbl0 (not defined), preferably a mixture of CAbl-CAb4, which can detect at least two or different isoforms of ING1. The antibodies are also useful for diagnosing a disease e.g. tumour or medical condition in an animal (preferably, human) associated with aberrant levels of an ING1 protein. The antibody or animal contains the land of the human inhibitor of growth 1 (ING1) isoform, animal 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                947

human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of the p53 gene many cases the mechanism of functional inactivation of tumours. In many cases the mechanism of functional inactivation of the p53 gene many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its revealed mutations in ING1 nor significant variations in its cancer etiology. However, alternative intitation exons of the ingl expression of one promoter (1a) produces a protein laving their own promoter have been discovered.

Expression of one promoter (1a) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 N-terminal amino acids. The newly discovered protein has been designated p37TNG1 (wild type: p331NG1). p37ING1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p37ING1 has the cancer proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ing1 or transmal peptide of p37TNG1 can also be used in detection methods for the p37TNG1 variant.

The polypeptides may be useful in gene therapy for treatment of collegancy and proving a proving a page of the polypeptide may be useful in gene therapy for treatment of collegancy and page of the polypeptide page and page of the polypeptide of p
                                                                                                                                                          Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products

                                                        The present sequence encodes a human cancer associated antigen.

The sequence is the wildtype of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polyynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.
                                                                                                                                                                                                                                                                                                                                               95

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    56 TyrGlnGluThrieuLysGluIleAspAspValTyrGluLysTyrLysLysGluAspAsp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A partial cDNA clone (AAT69651), designated ING1, codes for a novel tumour suppressor protein p331NG1 (AAM19118) that is a potent inhibitor of cell growth. It was isolated by subtractive the protein p31NG1 (BAM19118) that is a potent conversation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and Hela cDNA libraries. A complete ING1 sequence (AAT69652) was obtd. by 5'RACE. ING1 is localised to the 13q33-34 chromosome region, to which a number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer, a decreased level of ING1 mRNA indicates cancerous cells.
                                                                                                                               Tumour suppressor gene; ING1; p331NG1; breast cancer; brain cancer; diagnosis; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated tumour suppressor gene, ING1 - useful to develop products for inhibiting or increasing cell proliferation, in particular for treatment or diagnosis of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1902 BP; 574 A; 391 C; 461 G; 476 T; 0 other;

Growth) partial cDNA clone that codes form a pl331NG1 polypeptide (see AAW79674), a novel inhibitor of cell growth and a candidate (see AAW79674), a novel inhibitor of cell growth and a candidate (see AAW79674), a novel inhibitor of cell growth and a candidate cumour suppressor. Into is a new gene that is expressed in normal mammary epithelial cells, but which is expressed in normal cot expressed in many primary brain tumours. To isolate ING1, a subtractive hybridisation of breast cancer cell line cDNAs was performed with CDNA from normal mammary epithelial cells, and subtracted cDNAs were cloned into retrovirus vector pLNCX. Following passage through a packaging line, normal mouse mammary epithelial cells were infected, and infected cells were infected into note mice. Putative transforming fragments from tumours were contoured mice. Putative transforming fragments from tumours were isolated by PCR (see AAV62299-1) and subcloned into LNCX. An ING1 fragment was obtained and used to screen normal human fibroblast and Heia call cDNA libraries. 2 clones were sequence (see AAV6229) was obtained by RACE. A claimed method to potentiate apoptosis in a eukaryotic cell involves administering an active p33ING1 peptide or an oligonucleotide encoding such as a peptide con an oligonucleotide encoding such as a peptide con an oligonucleotide encoding such as a peptide con an entaryotic cell involves administering an antisense oligonucleotide. Also claimed are a method for inhibiting apoptosis in a eukaryotic cell, an assay for determining the level of p33ING1 ectivity in a eukaryotic cell, and an isolated eukaryotic cell, and an entariants that may be used to induce disclassing eucharyotic cell, and an entariants that may be used to induce
Modulating eukaryotic apoptosis by increasing p331NG1 activity -using p331NG1 derivatives, to induce apoptosis in cancer cells, and in the investigation of apoptotic pathways
                                                                                                                                                                                                                                                                                                                                                                                                         the nucleotide sequence of a human ING1 (INhibitor

porplantage or treating inflammation, or disorders associated with cell proliferation and apoptosis e.g. bone cancer, brain cancer, cervix cancer, adenocarcinoma, leukaemia, lymphoma or melanoma. They are particularly useful as models for developing human therapeutic targets, identifying therapeutic proteins, or serving as targets for the development of human therapeutic agents that modulate tumour suppressor protein activity in cells and tissues that express the tumour suppressor protein. Polypeptides of the invention are used for identifying agents that modulate their activity. They are useful for raising antibodies or eliciting an immune response; as a reagent in assays designed to quantitatively determine levels of the protein (or its binding partner or ligand) in biological fluids; or a markers for tissues in which the corresponding protein is preferentially expressed. The invention is also used as vaccines. The present suppressor generals located on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AspGluLys1leGlnIleValThrGlnMetLeuGluLeuValGluAsnArgAlaArgGln 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A full-length cDNA clone (AAT69652), designated ING1, codes for a novel 33 kDa tumour suppressor protein p33ING1 (AAW19119), formerly c p33IG1, that is a potent inhibitor of cell growth. A partial clone (AAT69651) was isolated by subtractive hybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa cDNA libraries. The complete ING1 sequence was then obtd. by 5'RACE. ING1 is localised to the 13q33-34 chromosome region, to which a c number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer; a decreased level of ING1 mRNA indicates cancerous cells. They can also be used in gene therapy methods to block the proliferation of cancer cells.
